SUGGESTIONS FOR RECEIVING FISH SHIPMENTS

1. Give us your ADDRESS AND TELEPHONE NUMBER and leave your TELEPHONE NUMBER with the Express Co., so they can call you immediately on arrival of shipment.
2. Have a clean aquarium prepared with seasoned water before arrival of shipment. Strain the water from our cans, adding it to your waiting aquarium. Remove fish from cans into jars (using water from can) and float these jars in your waiting aquarium until the temperature in the jars and that in the aquarium are the same. Then, release the fish into the aquarium. It is good to add a teaspoonful of salt to every 5 gallons of water in any newly set up aquarium. Dissolve salt in a separate container before adding to your aquarium. This amount will not hurt Plants or Snails and acts as a tonic on the new fish.
3. EXAMINE FISH SHIPMENT CAREFULLY ON ARRIVAL for signs of "ROUGH HANDLING" such as -

<u>Wet or torn carton</u>	<u>Flat packing</u>
<u>Low water level</u>	<u>Cans buried over</u>
<u>Bruised Fish</u>	<u>Etc.</u>

If such is the case, get a proper "Order Report" from the expressman stating "rough handling". This will give you grounds for claim in case of loss.

PLANTS AND HOW TO HANDLE ON ARRIVAL

In planting an aquarium, tall plants are usually placed in the background with the shorter plants in front. Vallisnerias as well as some types of Sagittarias are usually used in the background. We offer many decorative plants to be used as center plants. The type used depends on the size of the aquarium.

Bunched plants consist of several sprigs tied together with a piece of lead. Remove the lead and push each sprig into the sand where it will root. Plants sold as cuttings also root when planted in the aquarium

FLOATING PLANTS such as Salvinia, Floating Valentines, Water Hyacinths, Water Lettuce, Floating Water Fern, etc., should be allowed to float even though they have roots. They should not be planted!

L I G H T

Lack of sunlight is one of the greatest causes of plant spoilage. With a few exceptions, Aquarium Plants require from 3 to 5 hours of sunlight per day, or the equivalent in strong electric light in which the light bulb is placed directly over the surface of the aquarium water. Plants kept without some direct sunlight or artificial light usually deteriorate.

Sunshine is also necessary for the good health of fish. Some varieties contract the disease known as "Rickets" because of the lack of sunlight. Fish with this disease look caved-in and seem to have hollow stomachs.
